

Here are 8 Reasons To Adopt Robotic Process Automation This Year

Robotic Process Automation (RPA) is transforming the way global companies manage their operations to deliver stakeholder value and save costs.

#1 It's Not Science Fiction

Or a vision of the future. It's all happening right now. In companies around the world with high volume, and highly transactional operations.

55%
of companies plan to implement RPA in the near future.

37%
have already started implementing RPA.

#2 Costs Won't Save Themselves

Nor will they reduce themselves. But a lot of your processes sure can perform themselves, saving you substantial salaried man hours.

After all, **cost reduction is the #1 reason why** companies want to adopt RPA. Who wouldn't want to get more work done with less cost?

#3 To Err is Human Nature

Robotic Process Automation eliminates human intervention in highly manual and repetitive processes that are prone to administrative errors.

Quality improvement is cited as reason #2 for introducing RPA. Since quality is what strengthens their customer experience and value proposition.

#4 Half of Your Work Can Be Automated

You might think that there's not much manual work that can be automated by Robotic Process Automation. But here's the kicker—87% of respondents actually disagree with you.

87% believe that typically, up to **50%** of their processes can be automated.

#5 Redundancies Aren't Really As Scary

Well, this is not a robo-invasion. Instead, with process automation, your employees can focus on tasks that are valued more, in turn adding to their satisfaction.

Fact is that **93%** companies don't fear job redundancies.

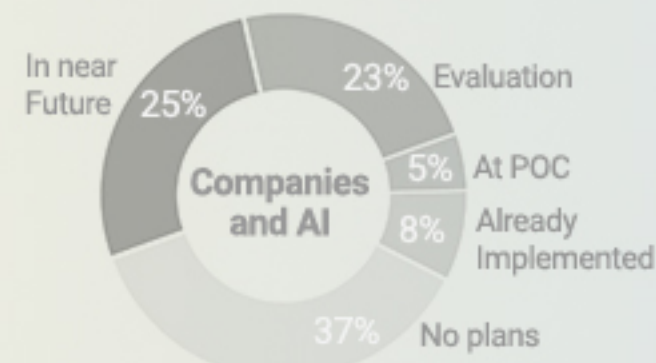

#6 You Don't Need Einstein To Drive It

But it isn't everyone's cup of tea either. As much as companies need experts to drive effective RPA implementation, they need not dedicate their expertise to it. Therefore, outsourcing RPA implementation seems like a great idea.

49%
prefer experienced vendors to help implement it.

#7 Get Another Step Closer to AI

Artificial Intelligence is transforming companies and processes as you read this. But it still has a long way to go. RPA acts as a low-risk stepping stone to leveraging AI for Business Process Transformation.

48% of companies are considering AI.
13% are either at AI PoC or implementation stage.

#8 It Impacts to Transform

How? By delivering operational efficiencies, boosting customer satisfaction, and aiding to an overall Business Transformation—that's how! Still not convinced? Then we've got another fact for you.

87%
companies believe that RPA will add significant value to their business.

Introducing LTI MOSAIC™ Automation

How about a partnership that sets up a self-funded automation model that delivers quick results? From Business Case development, to PoC, to implementation; L&T Infotech does it all. L&T Infotech has previously delivered the world's largest and fastest known RPA implementation for a global bank. Want to see how?
